Why News should be regulated to avoid Fake News?

One reason that I think news should avoid fake news, is because it can be a danger to any people who read it. It can miss guide them into thinking somethings are bad and somethings are not bad, when in reality it could be the opposite. For example if fake news spreads around quickly on all social media platforms it will be seen by millions of people and if they don't know its fake it can cause misunderstanding and confusion, and depending on what the fake news is about it can cause confusion about important social and political issues, as I said.

Another reason why I think fake news is bad, is because there are many fake and misleading news stories related to medical treatments and major diseases like cancer or diabetes. Trusting these false stories could lead you to make decisions that may be harmful to your health. If you saw something that said if you take this pill it can cure any disease would you take it?

Fake news is also bad for you for school. It can affect your grades and if it does it will have a huge, huge impact on your life. For example it your teacher gives you a website to do your revision on and your teacher didn't know that it had fake news on It could mislead you or give you false information that could lower your grades on important exams and as i said it could have a massive impact on your life.

You can spot fake news by checking this information on other websites.

This is why fake news is Bad and why all news should try to avoid fake news.
